

# Accelerated Capital Allowances Eligibility Criteria

*Category:* Catering and Hospitality Equipment

## ***Technology:* Commercial Combination Ovens**

Commercial electric and gas combination ovens are used in commercial kitchens and catering. They are categorised as electric (both full and half-size) and gas convection ovens (full-size only) where cookery within one unit is possible by using a combination of convection heat and steam.

**Commercial combination ovens are considered to include the following:**

### **Electric-powered combi ovens**

Electric-powered combi ovens are defined as half-size (capacity for a min. five pans<sup>1</sup>) and full-size (capacity for a min. 10 pans).

### **Gas convection ovens**

Gas convection ovens are defined as full-size only (capacity for a min. ten pans).

## **Eligibility criteria**

To be included on the ACA Specified List, the specific Commercial Combination Oven must meet *all* the relevant requirements set out below.

**Note:** *Supporting documentation that clearly demonstrates ACA compliance according to the conditions below will be required as part of the ACA checking process. Detailed information on the types of documents accepted can be found in the separate Supporting Documentation guidelines.*

### **General eligibility criteria**

(applicable to all Commercial Combination Ovens)

No.	Condition
1	All equipment and/or components must be CE marked as required by the specific EU directive(s).
2	Must comply with the Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) <sup>2</sup> and Waste Electrical and Electronic Equipment (WEEE) <sup>3</sup> regulations.

<sup>1</sup> Pan size as per Gastronorm

3	Must have the option to be supplied with an integrated condenser hood to regulate climate control in the location where it will operate or a heat exchanger to transfer heat from the steam exhaust to the incoming water.
---	--

### ***Electric-powered combi ovens – specific eligibility criteria***

(to be met in addition to the general eligibility criteria)

No.	Condition
4	Must achieve a minimum cooking efficiency of 70% (both half and full-size units).
5	Must not exceed 1.6 kW (for full-size ovens) or 1.0 kW (for half-size ovens) in electrical energy consumption while operating at a stabilised temperature set point (standby rate)

### ***Gas Convection Ovens – specific eligibility criteria***

(to be met in addition to the general eligibility criteria)

No.	Condition
6	Must achieve a minimum cooking efficiency of 44%.
7	Must not exceed 3.8 kWh gas consumption while operating at a stabilised temperature set point (standby rate)

-----End of ACA eligibility criteria -----

*Please see next section for guidance on:*

### **Technical details required in product submission Supporting documentation required**

<sup>2</sup> S.I. No. 341/2005 — Waste Management (Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment) Regulations 2005 as amended by S.I. No. 376/2008 — Waste Management (Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment)(Amendment) Regulations 2008.

<sup>3</sup> S.I. No. 340/2005 — Waste Management (Waste Electrical and Electronic Equipment) Regulations 2005 as amended by S.I. No. 375/2008 — Waste Management (Waste Electrical and Electronic Equipment) (Amendment) Regulations 2008.

# Guidance on product details and supporting documentation

**NOTE: The following information is not part of the official criteria document published within the relevant Statutory Instrument. It has been added here for guidance purposes only in order to help you to provide (a) product details and (b) the required supporting documentation.**

*All information contained in this guidance document is subject to change without notice.*

## Technical information required in product submission

The following are the specific technical values required as part of the product submission for this technology:

### Combination Oven product type

As part of the product submission you must select which type of oven your product is. Only one type can be chosen per submitted product.

### Cooking Efficiency (%)

The cooking efficiency of the product as a percentage is required as a value for the product submission. It must be entered as a number only without the % symbol. There should also be no spaces or full stops after the number submitted. The figure must comply with the minimum cooking efficiency criteria requirements of the type of combination oven chosen.

### Standby Energy Rate (kW)

The Standby Energy Rate of the product in kW is required as a value for the product submission. This is the energy consumption of the unit when it is operating at a stabilised temperature set point. It must be entered as a number only without any unit symbol. There should also be no spaces or full stops after the number submitted. The figure must comply with the Standby Energy Rate criteria requirements for the type of combination oven chosen.

## Supporting documentation required

Described below is the list of documents that are accepted as proof of compliance for the specific Combination Ovens condition.

**Note: This information will only be requested AFTER you submit your product's basic details online.**

### Important Notes to Product Providers

**Please ensure that you read the "Important Notes to Product Providers" section at the end of this document prior to submitting documentation.**

## General eligibility criteria

(applicable to all Combination Ovens)

No.	Condition	Supporting Documentation Requirement
1.	Products must be CE-marked	<p>Official and published manufacturer's technical data sheet or brochure that demonstrates CE marking compliance.</p> <p><b>OR</b></p> <p>A copy of an official signed declaration on headed paper which confirms CE marking compliance.</p> <p>Official declarations should explicitly state the product for which CE marking is being confirmed (i.e. do not provide a letter simply stating general compliance with the relevant ACA Condition).</p> <p>Where a document is used to demonstrate conformance for a number of products or range of products it should clearly specify each individual product covered by that document.</p>
2.	Products must satisfy the RoHS <sup>4</sup> directive 2002/95/EC and the WEEE <sup>5</sup> Directive 2002/96/EC	Official and published manufacturer's technical data sheet or brochure that demonstrates the requirements of the condition.
3.	Must have the option to be supplied with an integrated condenser hood to regulate climate control in the location where it will operate or a heat exchanger to transfer heat from the steam exhaust to the incoming water.	Official and published manufacturer's technical data sheet or brochure that demonstrates the requirements of the condition.

<sup>4</sup> Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment

<sup>5</sup> Waste Electrical and Electronic Equipment

**Electric-powered combi ovens – specific eligibility criteria**

(to be met in addition to the general eligibility criteria)

No.	Condition	Supporting Documentation Requirement
4.	The product must achieve a minimum cooking efficiency of 70% (both half and full-size units)	<p>Accredited certification that the minimum cooking efficiency of the product has been obtained by testing according to the named standard, and demonstrating that the cooking efficiency of the product is a minimum of 70%.</p> <p><b>OR</b></p> <p>Evidence of official testing by manufacturer or independent test lab carried out according to the principles outlined in the named standard, and demonstrating that the cooking efficiency of the product is a minimum of 70%. Test reports should be of the format described in the 'Important notes to Product Providers' section of this document.</p> <p>Accepted Standard: ASTM F1496: Standard test method for performance of convection ovens</p>
5.	The product must not exceed 1.6 kW (for full-size ovens) or 1.0 kW (for half-size ovens) in electrical energy consumption while operating at a stabilised temperature set point (standby rate)	Official and published manufacturer's technical data sheet or brochure that demonstrates the requirements of the condition.

**Gas-powered combi ovens – specific eligibility criteria**

(to be met in addition to the general eligibility criteria)

No.	Condition	Supporting Documentation Requirement
6.	The product must achieve a minimum cooking efficiency of 44%.	<p>Accredited certification that the minimum cooking efficiency of the product has been obtained by testing according to the named standard, and demonstrating that the cooking efficiency of the product is a minimum of 44%.</p> <p><b>OR</b></p> <p>Evidence of official testing by manufacturer or independent test lab carried out according to the principles outlined in the named standard, and demonstrating that the cooking efficiency of the product is a minimum of 44%. Test reports should be of the format described in the 'Important notes to Product Providers' section of this document.</p> <p>Accepted Standard: ASTM F1496: Standard test method for performance of convection ovens</p>
7.	The product must not exceed 3.6 kW gas consumption while operating at a stabilised temperature set point (standby rate)	Official and published manufacturer's technical data sheet or brochure that demonstrates the requirements of the condition.

## Important notes for product providers

### **General**

There should be a clear link between the product submitted and all supporting documentation. This will typically take the form of a *product code* or *product name* that can be cross-referenced between the submitted product and the relevant supporting documentation.

If product codes/names have been changed since publication of the supporting documentation, then you must provide official evidence of this with the supporting documentation supplied.

If there is any deviation from these requirements, the supporting documentation will not be considered adequate for the purposes of demonstrating compliance with the criteria conditions. This will in turn delay the submission and/or result in the product not being considered eligible.

Where the ACA criteria or help documentation makes reference to compliance with appropriate rather than specific standards, the onus is on the product provider to ensure that the supporting documentation supplied references recognised standards that apply to the submitted product, i.e. the product must be covered under the scope of a recognised standard.

If it is subsequently found that any product submitted does not meet the performance or specification criteria, it will cease to be considered eligible for the ACA.

**Note:** When supplying the supporting documentation through the online process, you must ensure, when demonstrating compliance with the relevant condition, that the correct page number(s) of the document is referenced. When referencing more than one page number, add an explanatory note.

### **Test report**

A test report must include an outline of the complete test, including:

- √ Introduction
- √ Details on test conditions
- √ The specific model details of the product tested
- √ The steps taken in the test
- √ The results
- √ Graphical representations
- √ Conclusion

All documents should be on headed paper and the document should be officially signed off. **All documentation must be in English**, or include adequate translation.

### **Certification**

Where certificates are provided, all tests must be carried out by an organisation that is accredited by a national accreditation body, recognised via the European Cooperation for Accreditation (preferred) or the International Accreditation Forum. **All documentation must be in English**, or include adequate translation.

## ***Scientific equivalence***

Some ACA criteria conditions allow for scientifically equivalent tests and/or standards to be used.

If a product has not been designed, manufactured or tested to the specific standard named, then documentation relating to an equivalent internationally recognised standard may be used, where the phrase '*or scientific equivalent*' is included in the ACA condition or help documentation.

In such applications, the onus is on the product submitter to demonstrate satisfactory equivalence of the standards. Submissions which reference such supporting documentation may take longer to process. If the product provider does not provide satisfactory evidence of equivalence, then the product will not be considered eligible for the ACA. **All documentation must be in English**, or include adequate translation.

**Note:** Where specific standards are cited in a condition or in the ACA help documentation, then documentation demonstrating that the relevant products have been designed, manufactured or tested to these specific standards is preferred. Scientific equivalence is considered the exception rather than the norm.

## ***Representative testing***

Where test information is required for a range of technically similar products (e.g. configurations of one base product), then – in exceptional instances – a form of representative testing may be used once *agreed in advance* with SEAI.

Such testing is where only representative products are tested from a technically similar group or range of products. Representative testing may form an acceptable basis for supporting documentation if:

- A clear correlation can be demonstrated between the tested product and a technically similar non-tested product
- and*
- Such a correlation clearly demonstrates the compliance of the non-tested product

**Note:** Where representative testing is used for a group or range of products, if the tested or representative product is removed from the list of eligible products then all related products are also removed.
